Unit 6 Hurlingham Business Park, Sullivan Road, London, SW6 3DU, UK

# Overview

This guide is intended for first time users of League Packages for the Tactic range of analysis solutions. To install, follow the step by step guide below. Notes relevant to existing users follow at the end of this document.

## 1. In a web browser, go to <https://rtsw.co.uk/league-packages/>

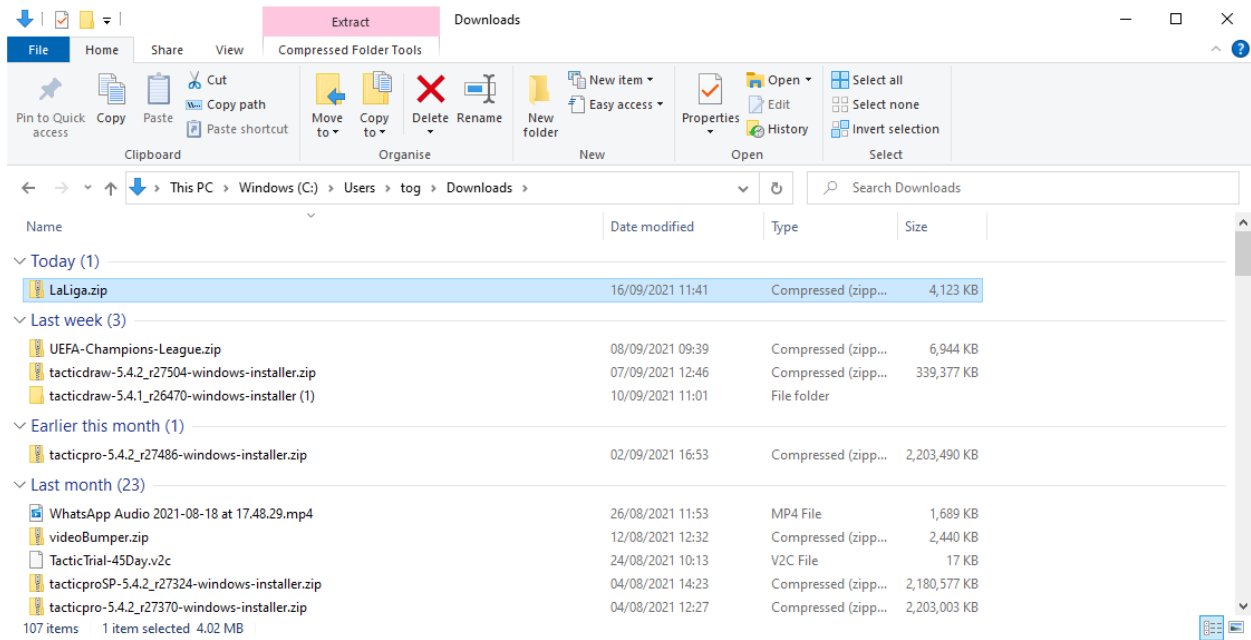

The screenshot shows the 'League Packages' page on the RT Software website. The page has a navigation bar at the top with the 'rt software' logo and links for Solutions, Products, News / Events, Support, About Us, Showreels, Partners/Press, and Contact Us. The main content area is titled 'League Packages' and includes an 'About League Packages' section with text explaining the feature. To the right is a 'Tactic' interface showing a grid of sports packages with dropdown menus for selection. Below this is a grid of 'Download Package' buttons for various leagues: Campeonato Brasileiro Serie A, Israel Premier League, NWSL, UAE Pro League, La Liga, Championship, UEFA Champions League, Installation Instructions, Premier League, MLS, Turkish Super Lig, and Russian Premier Liga. A footer contains contact info, recent tweets, terms and conditions, and a privacy policy link.

## 2. Click on the desired league package (in our case “La Liga”)

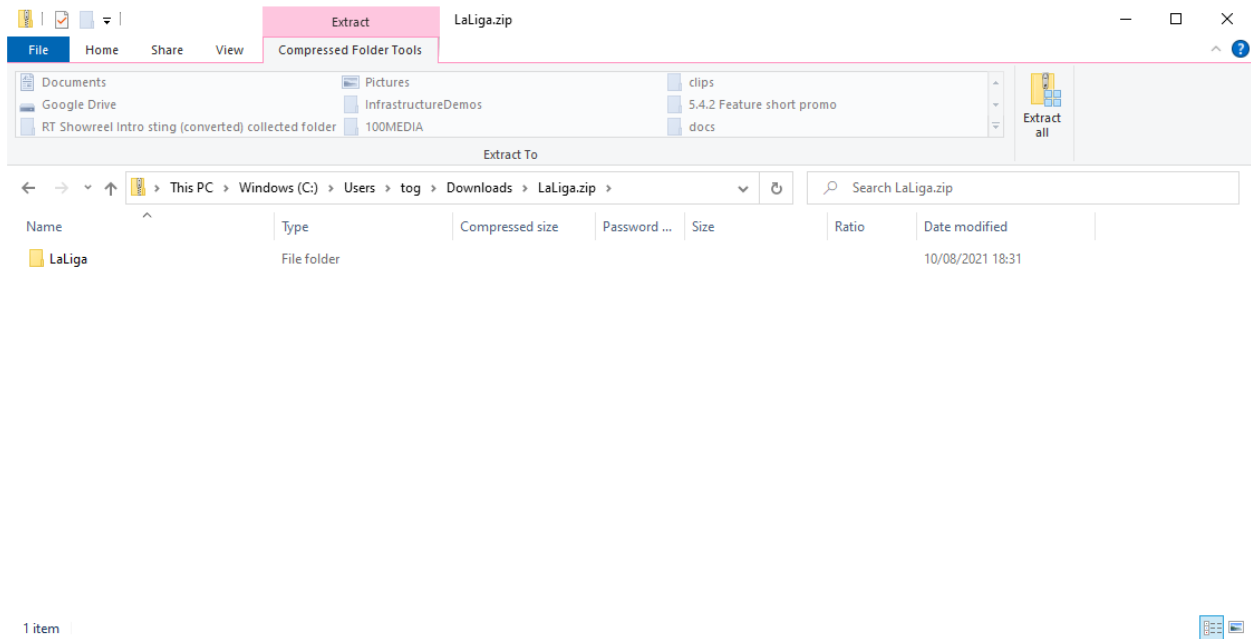

This will automatically start a download of a .zip folder called “LaLiga”

### 3. Locate the .zip folder

In our case the folder is in “Downloads”:

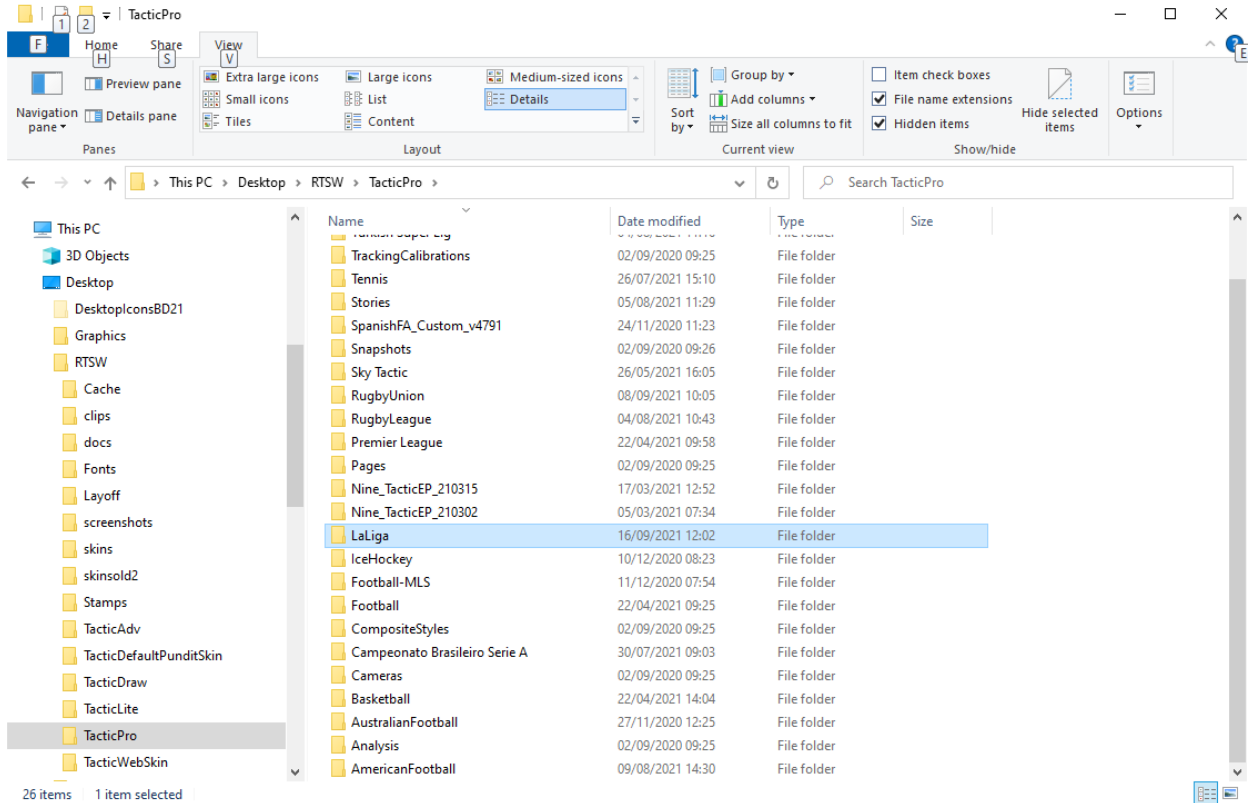

### 4. Click to unzip the package.

## 5. Copy and paste the folder in the “projects” location.

In our case this is in “\Desktop\RTSW\TacticPro”. For Tactic Advanced users it would be “\Desktop\RTSW\TacticAdvanced” and for Tactic Lite in “\Desktop\RTSW\TacticLite”.

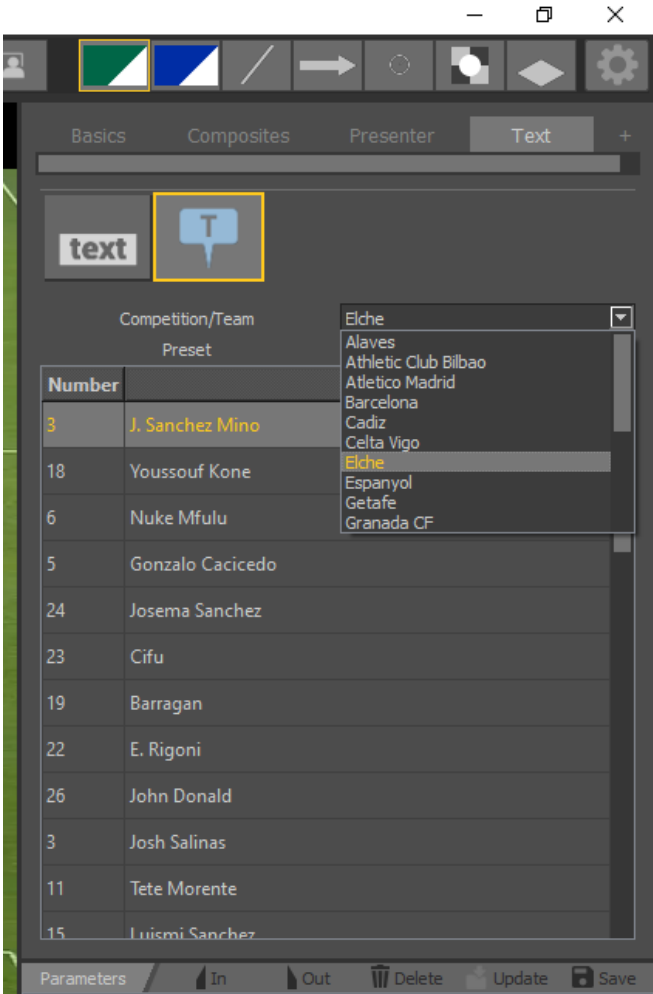

## 6. Now start Tactic and select the league package from the pull down list.

The installation is now complete. After selecting a League Package when starting the preset colour palette will reflect the colours of teams in the League:

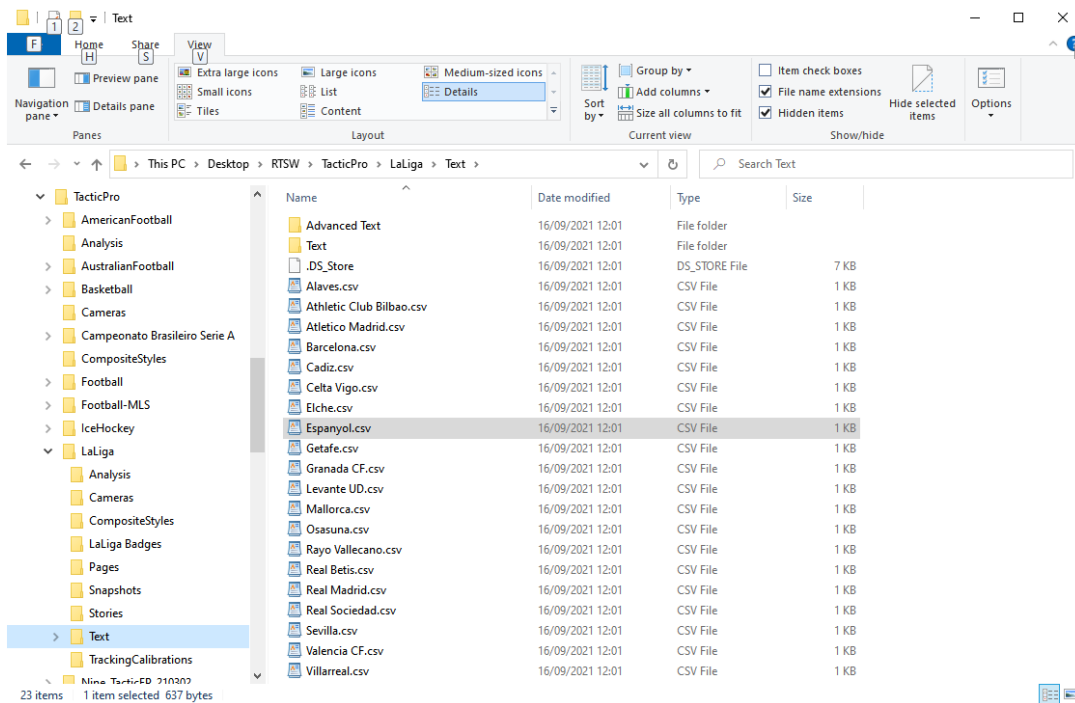

You will also find a “Text” page in the tool palettes where player names can automatically be accessed:

Player names can be added and removed from Team lists manually by opening and editing the corresponding .csv file in an application such as Word or Excel and re-saved (make sure to save in the .csv format).

.csv files can be found in “\Desktop\RTSW\TacticPro\LaLiga\Text”, where “LaLiga” corresponds to the name of your selected League Package.

## Notes.

- Do not rename the league package, it must remain the same as the original or links will be broken and it will no longer be functional.
- Installing an updated version of the package (a new season for example) will overwrite the original package including all analysis files. If you wish to keep your original analysis, it is recommended to rename the original package (“LaLigaOld” for example) and copy analysis files from the old folder to the new one after installation.
- If the League Package you require is not currently listed, please contact RT Software.
